#### DETAILED ACTION

Claims 1-10 are pending. Claims 1-6 are considered on the merits. Claims 7-10 are withdrawn from consideration as being drawn to a non-elected invention.

#### *Election/Restriction*

Claims 7-10 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b) as being drawn to a non-elected invention. Election was made without traverse in Paper No. 7.

It is acknowledged that upon the finding of allowance of a composition claim, claims directed to the use of this allowable composition may be rejoined.

#### *Claim Rejections - 35 USC § 112*

Claims 2, 4, 6 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

At least some of the claims require one of ordinary skill in the art to have access to a specific microorganism. Because the microorganism is essential to the claimed invention, it must be obtainable by a repeatable method set forth in the specification or otherwise be readily available to the public. If the microorganism is not so obtainable or available, the requirements of 35 USC 112 may be satisfied by deposit of the microorganism. The specification does not disclose a repeatable process to obtain the microorganism and it is not clear from the specification or record that the microorganism is readily available to the public.

The objection and accompanying rejection may be overcome by establishing that each microorganism identified is readily available to the public and will continue to be so for a period of 30 years or 5 years after the last request or for the effective life of the patent, whichever is longer, or by an acceptable deposit as set forth herein. See 37 CFR 1.801-1.809. If the deposit is made under the terms of the Budapest Treaty, then an affidavit or declaration by applicants or a statement by an attorney of record over his/her signature and registration number, stating that the deposit has been made under the Budapest Treaty and that all restrictions imposed by the depositor on availability to the public of the deposited material will be irrevocably removed upon issuance of the patent would satisfy the deposit requirement. See 37 CFR 1.808.

Assurance may be provided in the form of an affidavit, declaration or averment under oath or by a statement of the attorney of record over her or his signature and registration number.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action: A person shall be entitled to a patent unless (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent, (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States, (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1, 3, 5 are rejected under 35 U.S.C. 102(b) as being anticipated by EP 84334 [N] or Bozal *et al.* [3].

The claims are directed to a microbe classified as *Alteromonas* which produces a biojelly and a coating containing the microbe. Please note, that the coating stipulated in claims 3-6 may be the slime or exopolysaccharide produced by the microbe itself. Thus, a cultured microbe expressing the exopolymer is considered to fulfill the limitations of the composition as claimed.

The references are relied upon as explained below.

EP 84334 discloses a microbe from the genus *Alteromonas* (FERM P-6282) which produces exopolysaccharides (biojelly), page 3, line 25 onward. The fermentation broth contains both the polysaccharide and the microbe, example 1.

Bozal *et al.* disclose a microbe (NF<sub>3</sub>) from the genus *Alteromonas* which produces exopolysaccharides. Fig. 2 discloses NF<sub>3</sub> in a mucoid or a viscous substance capable of coating objects.

Claims 2, 4 and 6 are free of the art. Method claims incorporating this subject matter may be rejoined. Please submit amendments so that allowance of this subject matter may be facilitated.
